Problem: People who regularly buy and store groceries at home often forget about items that are approaching their expiration dates. As a result, food may expire before it is used, causing unnecessary food waste and money loss.

Who exactly has it: Parents, working adults, and people who regularly purchase and store groceries for themselves or their household.

Why it matters / what it costs them today: They may waste money by throwing away expired food and spend extra time manually checking expiration dates, and having problems after eating expired food.

Gate 1 — Reachable Users

1. [Mya] — Parent / household grocery buyer — Family member — [2/9/2026]
2. [Hanna] — Working adult — Family friend / neighbor — [3/9/2026]
3. [Cindy] — Household grocery shopper — Friend / neighbor — [1/9/2026]

GATE 2 — MVP SHAPE

FR-1 — Account & Premium	**FR-6** — Expiring / expired items
FR-2 — Manage grocery items	**FR-7** — Premium receipt or items scanning
FR-3 — Calculate expiration date	**FR-8** — Auto category detection
FR-4 — Expiration notifications	**FR-9** — Custom reminder settings
FR-5 — Display active items	**FR-10** — Expired history (7 days Free / Premium unlimited)
FR-11- Premium usage summary (daily, weekly, and monthly)	

FR with a real rule/decision:

FR-3 — The system shall calculate and display the estimated expiration date based on the grocery category and purchased date.
FR-7 — Premium users can scan unlimited receipts.
FR-10 — Free users can view expired grocery history for 7 days; Premium users can view unlimited history.
FR-11: Premium users can view daily, weekly, and monthly usage summaries. The monthly summary resets at the end of each month.

Data that must persist:

User accounts, grocery details, expiration dates, item status, reminders, subscriptions, scan usage, expired history, and usage summaries.

Gate 3 — Access:

Required resources include databases, date/time functions, notification systems, receipt/OCR services, development tools, APIs, and third-party libraries. The team will check availability and licensing before use.

PROCESS & TEAM Chosen SDLC: Agile — Develop the system in short iterations, test with users, and improve based on feedback. Start with grocery tracking and expiration alerts, then add advanced features gradually.
